FINDING THE RIGHT EQUIPMENT:

A Land Clearing Project Guide

Choosing the right equipment is the most critical step in any land clearing project. The type of equipment you use will significantly impact the outcome of your project, so it's important to take the time to research your options and select the best possible tool for the job.

At Rut Manufacturing, we want to make your job easier by creating heavy-duty tools that go the distance. There are a few different factors to consider when choosing land clearing equipment, including the type of terrain you'll be working on, the size of the area you need to clear, and the type of vegetation you'll be dealing with. Here's a quick guide to help you select the right equipment for your next land clearing project.

Dealing with Hard-to-Reach Areas?
Consider the Following Attachments!

SKID STEER BRUSH MOWER

This skid steer attachment with a two-blade system enables you to reach hard -to-reach places quickly and accurately. The Skid Steer Brush Mower works well in tight locations, dense clearings, thick gardens, and overgrown areas.

EXCAVATOR BRUSH MOWER

The Excavator Brush Mower is the ideal excavator brush cutter attachment for difficult-to-reach places. Its 3/16" deck and AR400 blades are a potent force against trails, slopes, ponds, and ditches. With the Excavator Brush Mower, the most difficult task will be a snap.

SKID STEER AUGER

The Skid Steer Auger transforms your skid steer into an innovative drilling machine, allowing you to remove any undesirable growth with the help of a skid steer brush cutter.

EXCAVATOR AUGER

The Excavator Auger is the solution if you need equipment that will reach over a difficult wall or hole. This handy device may just save you money and man hours.

Equipment to Cut Down Trees with Ease

TREE SLAYER

The serrated edge of our excavator tree shear is designed to cut and trim trees, brush, grind out tiny stumps and roots, then collect the debris in a neat pile with the back edge. This Tree Slayer is built to last through any tree-cutting endeavor.

When it comes to tree removal equipment, the faster you can cut down trees, the better. Tree clearance tools must be able to fit into tight places that other devices cannot access. Furthermore, the brush-cutting attachment must have strong mulching teeth capable of pulverizing dense materials like trees and branches.

SKID STEER FORESTRY BRUSH CUTTER GLADIATOR

The Gladiator Forestry Brush Cutter is a skid steer attachment for uneven ground, on-site preparation, and emergency cleanup. The Gladiator is an industrial-grade machine with the ability to chop and mulch any bush or tree it comes into contact with.

The Gladiator's push bar is designed to keep trees and bushes in front of the cutter so they may be readily shredded. This forestry brush cutter's 1" thick blade carrier is made of durable carbide-tipped mulching teeth. The mulching teeth help to mince through forest foliage and stumps and handle big debris and overgrowth with ease.

SKID STEER FORESTRY DISC MULCHER ANNIHILATOR

The Annihilator is ideal for various work locations if you need a forestry disc mulcher attachment that can save you time. The Annihilator is quick, efficient, and long-lasting, allowing you to complete your job in no time.

The Annihilator is designed for demanding environments and powered by a bent axis piston engine, with a hydraulic pressure gauge to ensure you get the most out of this skid steer brush cutting attachment. This tool may cut trees up to 14 inches in diameter!

The Best Equipment for Farmland, Right of Ways, and Trails

SKID STEER BRUSH CUTTER TERMINATOR XP

In contrast to other skid steer land clearing equipment, this brush cutter can easily cut overgrown bushes and vexing native grasses. The Terminator XP is made of high-quality materials, making it suitable for residential and commercial usage.

We've added a thicker deck (from 3/16") and deck sides (from 5/16"), which protects your equipment from abrasive brushes and overgrowth. Carbide-tipped mulching blades between the blades enhance the work efficiency by allowing you to more easily shred unruly shrubbery, bush growth, and tree stumps.

BRUSH ELIMINATOR

The Brush Eliminator is a versatile, compact excavator attachment that may tackle anything from tiny pathways to massive clearings. With the Brush Eliminator in your land clearing equipment arsenal, you'll be able to finish the most difficult job sites in less time.

Choosing the right equipment is essential if you want to excel in your next land clearing project. From skid steer brush cutters to excavator augers, a wide range of equipment is available to suit your specific needs. **View Rut Manufacturing's full catalog today** to find the perfect tool to ensure success.
